Interactive poster sessions offer researchers the chance to present their work in a visual format and allow more opportunity for interaction and discussion. Poster sessions are scheduled for 90 minutes. Up to six presenters are each offered a brief presentation slot to introduce the poster (max. 3 minutes), after which there will be time to discuss each poster in greater depth, in smaller groups.

Below you can find guidelines for the creation of a poster, containing the following information:

- Title and authors
- Research problem statement or objective of the project
- Hypothesis or research questions
- Method: a description of the sample, design, materials and procedure of the study
- Analyses of the study
- Most important results
- Major conclusions, theoretical and/or practical implications

A poster should be as self-explanatory as possible so that your main aim as the presenter is to supplement the information it contains. As such, make sure your poster is clear, structured, concise and attractive.

Clarity and structure

The title and authors’ names and affiliations should be at the top of the poster. Although there is room for flexibility, it is often useful to have panels indicating, for example, the aims of the research, the methods and subjects involved, and the material used. Other panels might highlight the most important results and the conclusions. Diagrams, graphs and tables can be used effectively to visualise results.
Conciseness
As space is very limited, be sure to present the most important information only and effectively. Don’t overcrowd the poster with too much data or too much text. The title and the conclusion are the most important “eye catchers”. They should say something such as “Teaching method A doubles the motivation of at-risk students”, as opposed to “The effects of a new teaching method on learners”. Make sure that the message you want to convey is supported by the information and not lost in it. Although concise, make sure you give the necessary theoretical information.

Attractiveness
Be aware that your poster is viewed from a distance. Therefore, all text should be large enough to be read from a distance of about 1.5 m. The major titles/subtitles should be in large letters, at least 2-3 cm when printed. There should be enough space between text lines (1.5 – 2 line spaces). You can use background colours (they should not distract) and arrangements of columns or rows to connect portions visually that are related conceptually. Such layouts help guide the audience through the poster.

General Considerations
The size of your poster should be ISO A0 in portrait format. Easels and pins will be provided. It is recommended that the presenter has a number of copies of the poster in the form of handouts in ISO A4 format (or the extended summary) to distribute to interested participants.
