How to submit a poster?

Proposals for a poster presentation follow a two-part structure:

1. A **short abstract** with max. 250 words and
2. an **extended summary of 600-1000 words** (with references), which should include:
1. a short theoretical framework, aims of the study and research questions,

2. methodology (including participants, context, materials and data analyses),

3. (preliminary) results

4. discussion/conclusions (including theoretical and/or methodological implications).

5. an indication of how the presentation is designed to "walk the talk", i.e., How do the poster design and pitch reflect the core message/issue you wish to deliver/address? How will the participants' experience of your poster and presentation allow them to understand its content better?
